GUY WIRE BRACKET IN STAINLESS STEEL

It is manufactured to manage 3 cables (not supplied) at 120° necessary to stabilize the chimney. It must be used when the change from last support is higher than 1,50 meters. A second collar is needed if the change is between 3 and 4 meters. Over 4 meters the chimney must be placed against a rigid structure (values valid from Ø 80 to Ø 300; for bigger Ø refer to booklet instruction).

The records, the specifics and the representations of the following catalogue are undemanding. Expo Inox S.p.A. reserves the right to introduce, at any time, the modifications that considers necessary.
